

# All-In-One Staking Solution

Bitcoin Suisse provides an all-in-one staking solution for various crypto currencies. Let us do the work, while you earn the rewards.

## Staking – shortly explained

Staking means locking up coins or tokens to help verify transactions as a validator. This procedure only works for blockchains based on a Proof-of-Stake consensus protocol and allows validators to earn staking rewards in the meantime.

## How does it work?

When you plan to stake, you will have to invest resources in setting up a wallet, finding dedicated hardware, and running and maintaining the setup needed for the process. These requirements are all covered with the Bitcoin Suisse staking service. You decide which currency you would like to stake, and you can receive and monitor your rewards coming into your Bitcoin Suisse Online account - on a continuous basis.

## Why stake with Bitcoin Suisse?

Bitcoin Suisse is an established and trusted counterparty and therefore offers many advantages compared to anonymous delegation services available. Furthermore, being a client of Bitcoin Suisse enables you to convert rewards to fiat or other crypto currencies in the same interface and of course gives you access to all other Bitcoin Suisse services.

## Fee

The flat fee charged for this service results in 15% of the rewards generated (including VAT, if applicable). You can read more about staking with Bitcoin Suisse and always find our updated list of available currencies for staking here: [bitcoinsuisse.com/staking](https://bitcoinsuisse.com/staking)
